PROFILE

Informatics Engineering graduate with a strong foundation in data analytics, statistical analysis, and database management. Experienced in data preprocessing, cleaning, exploratory data analysis, and data mining using Python and SQL. Familiar with data visualization and reporting using Microsoft Excel, Tableau, and Looker Studio. Hands-on experience in academic research involving large-scale datasets, relational database design, and information system development. Published research at SIML 2026, demonstrating strong analytical and research capabilities. Also experienced in academic research, contributing to data analysis and scientific manuscript writing as a co-author. Skilled in Python, SQL, Git, and database management, with an interest in supporting research activities and information retrieval system development.

EDUCATION

Muhammadiyah University of Surakarta **Surakarta, Central Java**
Bachelor's Degree in Informatics Engineering 2026

- GPA 3.92/4.0
- Relevant Courses: Data Warehouse, Data Mining, Machine Learning Fundamentals, Database Systems, Algorithms and Data Structures, Statistics.

RESEARCH EXPERIENCE

Undergraduate Researcher | First Author **Surakarta, Central Java**
Research Title: "A Socio-Technical Analysis of Bug-Introducing Commits in the Apache Ecosystem" 2026

- Developed an RA-SZZ-based mining pipeline in Python to identify Bug-Introducing Commits (BICs) across five Apache open-source projects (ActiveMQ, Camel, Hadoop, HBase, Tuscany) to generate a cross-project dataset for bug-lifecycle analysis.
- Integrated Git repository data with JIRA metadata and applied two statistical methods, Spearman correlation and Mann–Whitney U tests, to examine technical and socio-technical factors associated with bug risk, detection latency, and resolution time.
- Analyzed bug lifecycle and developer behavior across multiple large-scale software repositories.
- Published at the 2026 International Conference on Smart Computing, IoT, and Machine Learning (SIML 2026). DOI: https://doi.org/10.1109/SIML69834.2026.11621096

Research Assistant | Co-Author **Surakarta, Central Java**
Research Title: "Understanding Workflow Dynamics Beyond Conventional Performance Metrics" 2026

- Performed data preprocessing, cleaning, and exploratory data analysis (EDA) to prepare, examine, and identify patterns in research datasets.
- Contributed to scientific manuscript writing as a co-author, drafting and refining research sections based on analytical findings.
- Participated in manuscript development and revision for a scientific paper currently under journal review.

WORK EXPERIENCE

Laboratory Assistant, Data & Computer Science Courses **Surakarta, Central Java**
Muhammadiyah University of Surakarta 2023 - 2026

- Guided 30+ students per term in Data Warehouse and Data Mining laboratories, covering data preprocessing, cleaning, transformation, classification, and clustering with Python and SQL.
- Mentored students in Object-Oriented Programming, Algorithms, and Full-Stack Web Programming.
- Developed assessment materials and gave technical feedback on student work.

Team Lead & Fullstack Web Developer Intern **Surakarta, Central Java**
Dinas Komunikasi, Informatika, Statistik dan Persandian *March 2025 – May 2025*
Project: SI TOEKANG – Integrated Government Maintenance System

- Led development of SI TOEKANG, a government maintenance reporting system built with Laravel, Filament, PHP, and MySQL. Translated operational requirements from government stakeholders into application workflows.
- Replaced unstructured WhatsApp-based reporting with centralized submissions, status tracking, and structured service records.
- Designed a normalized MySQL relational database and implemented CRUD functionality.

PROJECT

Sentiment Analysis of iQIYI User Reviews **Surakarta, Central Java**
Muhammadiyah University of Surakarta 2024
Tech Stack: Python, NLP, IndoBERT, Data Mining, Scikit-learn

- Scraped and preprocessed iQIYI user reviews, applying text cleaning and normalization to prepare Indonesian-language data for sentiment analysis.
- Fine-tuned IndoBERT to classify reviews into positive and negative sentiment categories and evaluated model performance using standard classification metrics.
- Analyzed sentiment distribution trends to identify patterns in user opinions and derive insights into user satisfaction and perception.

Merchandise Studio Website **Surakarta, Central Java**
Muhammadiyah University of Surakarta 2024
Tech Stack: Laravel, MySQL, Procreate

- Designed and developed an interactive promotional website using Laravel and MySQL, creating a dedicated digital presence for a merchandise studio beyond social media.
- Created original digital illustrations and visual assets in Procreate, establishing a distinctive visual identity for the website and merchandise studio.
- Implemented responsive layouts and interactive content delivering a functional promotional platform for showcasing the studio and its creative work.

SKILLS

- **Programming:** Python, SQL, PHP, JavaScript
- **Data Analytics:** Data Cleaning, EDA, Statistical Analysis, Data Mining, Excel, Tableau, Looker Studio
- **Machine Learning & NLP:** Scikit-learn, IndoBERT, Classification, Clustering
- **Database & Tools:** MySQL, Data Warehouse, Git
- **Web Development:** Laravel, Filament

LANGUAGES

- Indonesia (native)
- English
